

Ways of Successfully Turning Dreams and Goals into Realities

O.S.Olagammal

About me

Pre-final year student in St.Joseph's institute of technology

Front-end developer intern in Saama technologies. I work primarily on javascript.

WHY am I here today?

Share with you all about :

How I started?

What I initially thought was right?

What was actually true?

What mistakes did I make in the learning process?

What suggestion I would give to others who are just starting their coding journey ?

A bit background about myself....

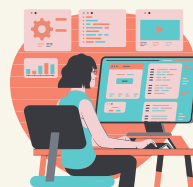

Took up biology in 12th

Wanted to become doctor

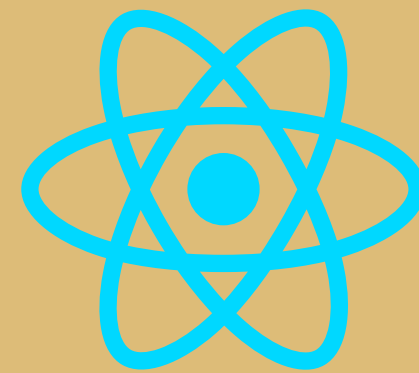

Took up engineering..

Started coding seriously.

HOW I started with web development...

#100DaysOfCode

Difficulties I faced while learning

Had confusion in choosing the "right" resource to study.

Concentrated on certificates more.

Difficult to maintain a balance between college work and self-learning.

Did not know how much I should learn to build projects.

Imposter syndrome.

HOW I overcame those difficulties...

Watched tutorials, read from documentation to understand more.

Allocated fixed time for college work and set a weekly goal.

Built projects while learning. No need to master language to start building projects.
Improved my skills and help me gain confidence.

Concentrated on project building and skills, rather than certificates.

HOW I landed an internship...

Bhavani, my mentor, guided me to land in an internship

Things I learnt during the internship period

Soft skills as important as technical skills.

Communication is the key.

Reach out to people whenever you need clarity.

You never stop learning.

Just now starting your coding journey?

Get out of the tutorial hell.

T-shaped learning.

Be a Jack of ALL trades but Master of ONE.

Learn at your pace. This is a marathon and not a race.

Showcase your learnings and projects on twitter and linkedIn.

**Some great platforms where
you can learn a ton...**
